

Zachary Carlin

Senior Software Engineer | Frontend & Full-Stack TypeScript

Tampa, Florida · Remote US · 727 505 9511 · zacarlin@gmail.com · linkedin.com/in/zachary-carlin-85402a123 · github.com/about7sharks
Authorized to work in the United States · No sponsorship required

PROFESSIONAL SUMMARY

Senior software engineer with eight years of experience building data-rich web products with TypeScript, React, Next.js, Vue, and Node.js. Frontend technical lead for a B2B financial-data platform, owning technical direction and delivery from product and Figma requirements through tested production software. Experienced in legacy modernization, APIs, data systems, and reliable applied-AI workflows for remote teams.

TECHNICAL SKILLS

Frontend: TypeScript, JavaScript, React, Next.js, Vue, Nuxt, HTML, CSS, responsive design, server-side rendering, Figma implementation

Backend and data: Node.js, Python, REST APIs, GraphQL, SQL, Postgres, MongoDB, Firebase

Delivery and quality: Docker, Git, CI/CD, AWS, Google Cloud, Jest, test-driven development, ESLint, technical-debt controls

Applied AI systems: tool use, retrieval, deterministic evaluations, redaction, regression comparison, human approval, observability

PROFESSIONAL EXPERIENCE

Main Street Data — Senior Software Engineer

Remote · July 2023–Present

- Lead frontend technical direction and delivery for a B2B financial-data product, taking features from product and Figma requirements through tested production software.
- Led the migration from the Next.js pages router to the app router and introduced server-side rendering to improve initial-load behavior and reduce interface flicker.
- Built a KPI API for B2B clients; contribute across frontend, API, and data concerns.
- Modernized frontend quality controls with ESLint flat configuration, stricter checks, and type-debt tracking across shared application areas.

Sonobi — Senior Software Engineer

Remote · July 2022–July 2023

- Built and maintained React applications across legacy class components, modern hooks, and asynchronous product flows.
- Replaced legacy jQuery workflows with maintainable React components.
- Integrated React features with PHP and Python services and improved GraphQL/Postgres-backed API paths.
- Contributed to Prebid.js and coordinated daily engineering delivery across the team.

Dogwood Logic — Software Engineer

Remote · February 2021–May 2022

- Implemented decentralized identifiers and verifiable credentials with Node.js and TypeScript.
- Built Vue.js interfaces for encrypted healthcare applications.
- Used test-driven development and realistic user-flow simulations to improve reliability.

Gulf Photonics — Software Engineer

Tampa, Florida · July 2018–August 2020

- Led software development for an IoT embedded sensor and its web dashboard.
- Built Node.js and Vue.js interfaces and APIs for sensor interaction.
- Managed MongoDB and Firebase data stores across mobile, desktop, Unix, and Windows environments.

INDEPENDENT ENGINEERING

Z4C Platform — Owner / Product Engineer

- Deployed and operate a React/TypeScript/Cloudflare product with lead intake, timezone-aware booking, concurrency-safe storage, abuse protection, analytics, automated tests, and production verification.

AI Reliability Systems — Owner / Operator

- Built and operate private AI workflow and evaluation systems that detect regressions, redact persisted output, compare scorecards, and keep promotion human-reviewed and rollback-aware.

EDUCATION

Associate of Arts — St. Petersburg College, 2018
